10/2011-Present: DFA Canada Global Equity Portfolio Class F gross of fees, minus estimated forward-looking MER of 0.0267% per month

For periods prior to the each of the listed fund's inception dates, indices (net of forward-looking MER estimates) are used to approximate returns. Backtested index performance is hypothetical and is provided for informational purposes only to indicate historical performance had the index been calculated over the relevant time periods. Dimensional Global Indices consist of a Global Equity allocation and a Fixed Income allocation. The equity allocation combines the following indexes: Dimensional Canadian Core Equity Index, Dimensional Canadian Vector Equity Index, Dimensional US Core Equity Index, Dimensional US Vector Equity Index, Dimensional International Core Equity Index, Dimensional International Vector Equity Index, and the S&P Global REIT Index (gross div). The weight of the REIT index is fixed at 4%. Within the remaining non-REIT equity allocation, Canadian equities are held at 33.33%, then rescaled and rounded to the nearest 1%. The weights of US and International equities are held at their respective market capitalization weights and then rescaled to sum to the total non-REIT, non-Canada weight of the Index Model, rounded to the nearest 1%. Regional weights are determined at each quarter-end and held constant for next three months. Within the Canadian allocation, each month the weights are allocated to the core and vector indexes at 70% and 30%, respectively. Within each of the US and International allocations, each month the weights are allocated to the core, core (hedged to CAD), vector and vector (hedged to CAD) indexes at 35%, 35%, 18% and 12%, respectively. The Fixed income allocation consists of: Dimensional Global Short-Term Government Variable Maturity Index (hedged to CAD) (6%), Dimensional Global Adjusted Investment Grade Index (hedged to CAD) (9%), and Dimensional Global Targeted Credit Index (hedged to CAD) (5%). Returns on the indexes are calculated net of fees and withholding taxes using estimates based on prior years' actual MER and tax withheld. These values are deducted from the indices' returns monthly.
